Century Longmai at Mobile Asia Expo

This article on Mobile Asia Expo (MAE) demonstrates the biggest developments from the event held at Shanghai New International Expo Centre (SNIEC) Pudong district, Shanghai, China on 11th to 13th June, 2014.

As it's always critical for technology to extend to targeted market, more than 240 companies showcased their goods, games and services and were able to experience exciting new mobile devices, wearable technologies, mobile applications, back-end solutions, games, accessories. The expo really offered much exposure to what technology has for us in the 21st century.

The obvious and expected technological innovations like a connected city, connected living, several major mobility and security trends were at display and guaranteed attendees experience Near Field Communication (NFC) technology with demos were information and transactions (like ticket booking, shopping, etc) are exchanged through mobile.

Again, the new technology trends like BYOD, Cloud services, oneAPI or all-in-one sign on), in-car Digital Video, Global Positioning Systems (GPS), and much more innovations from both Chinese and other international companies also proved success in video use over cellular and Wi-Fi networks and their

exciting results from LTE implementations.

We think the marketplace for digital applications is gaining much interest for a society to live digital trusting fully managed strong authentication solutions already or yet to be on the market because two factor authentications (2FA) and multi-factor authentication (MFA) tricks in management systems proactively address key mobile privacy challenges.

We hope found this valuable and engaging.
